

IN THE ABSTRACT:

Please amend the Abstract to read as follows:

--a A developing cartridge is detachably mountable to a main assembly of an electrophotographic image forming apparatus. ~~The apparatus, the apparatus includes; a frame; a developing device means for developing an electrostatic latent image formed on an electrophotographic photosensitive member; a first projected portion engaging portion, projected from the frame, for engagement with a first positioning portion provided in the main assembly of the apparatus when the developing cartridge is mounted to the main assembly of the apparatus to position the developing cartridge; a second projected portion engaging portion, projected from the frame, for engagement with a second positioning portion provided in the main assembly of the apparatus when the developing cartridge is mounted to the main assembly of the apparatus to regulate rotation of the developing cartridge about the first positioning portion; and a cartridge guide member contacting member, projected from the frame, for contact to a main assembly guide portion provided in the main assembly of the apparatus to guide the developing cartridge when the developing cartridge is mounted to the main assembly. The of the apparatus, wherein the second projected portion is urged in a direction to contact of contacting to the second positioning portion when the developing cartridge is set in the main assembly of the apparatus.~~
